15.12.2.11 \texttt{max(value1, value2, …)}

Given one or more arguments, returns the largest of the arguments.

- If no arguments are given, the result is $-\infty$.
- If any argument is \texttt{NaN}, the result is \texttt{NaN}.
- The comparison of values to determine the largest value is done as in 11.8.5 except that $+0$ is considered larger than $-0$.

15.12.2.12 \texttt{min(value1, value2, …)}

Given one or more arguments, returns the smallest of the arguments.

- If no arguments are given, the result is $+\infty$.
- If any argument is \texttt{NaN}, the result is \texttt{NaN}.
- The comparison of values to determine the smallest value is done as in 11.8.5 except that $+0$ is considered larger than $-0$.
