Minutes of the: Ecma TC39, ES3.1WG
held in: Yahoo! Sunnyvale Campus
on: 26 March 2008

1 Roll call and logistics
1.1 Participants
Doug Crockford (Yahoo!)
Mark Miller (Google)
Allen Wirfs-Brock (Microsoft)
Pratap Lakshman (Microsoft)
Kris Zyp (The Dojo Foundation)
Collin Jackson (Stanford)

2 Agenda
Run through deviations doc
Prep for ES3.1 vs ES4 reconciliation
Discuss candidate extensions
Language version/feature conditioning
Organizing spec writing effort
Separating meta

3 Minutes
ES3.1. spec
It will be created as a separate doc by marking up the ES3 document. We'll need a “summary of changes” doc, too. As we get agreement on 1 and 3 we should start incorporating it into the ES3.1 spec.

Prep for ES3.1 vs ES4 reconciliation
Lets discuss this at the TC39 F2F tomorrow

Organizing spec writing effort
Allen: Meta - how to provide meta operations like defining property getters/setters, etc
pratapL: Date - can spend about 2 days a week – Date
Doug: can spend 1 day a week
Kris: getters/setters - can spend couple of hours a week
Mark: fix, freeze - will not be able to spend time writing - can review content – will help pin down on security aspects
Collin: version conditioning
pratapL will maintain the latest stable version of the spec. ES3 will be base the doc.

**Separating Meta**
Kris: Discussion on getters/setters, how to simulate it using catchall, the need for definegetter/definesetter in ES4
Allen: It can also be implemented using Meta
All: Suggested syntax looks like the following:

```javascript
Meta.defineProperty(myObj,
    { name : "foo", setter : function (val) { /* */ }}
)
myObj.foo = x;
```

**Run through deviations doc**
Mark/Allen: Discussion on Object.fix and Object.freeze and how it can be implemented using Meta
Mark/Allen/Doug/pratapL: detailed updates to the deviations doc (that pratapL will update on the wiki)

**Discuss candidate extensions**
Deferred.

**Next ES3.1WG F2F**
27 May ES3.1 F2F, Yahoo!

Meeting adjourned.
