Minutes of the: Ecma TC39, ES3.1WG
held in: Yahoo! Sunnyvale Campus
on: 26 March 2008

1 Roll call and logistics

1.1 Participants
Doug Crockford (Yahoo!), Collin Jackson (Stanford), Pratap Lakshman (Microsoft), Mark Miller (Google), Allen Wirfs-Brock (Microsoft) and Kris Zyp (The Dojo Foundation).

2 Agenda
Run through deviations doc
Prep for ES3.1 vs ES4 reconciliation
Discuss candidate extensions
Language version/feature conditioning
Organizing spec writing effort
Separating meta

3 Minutes

ES3.1. spec
It will be created as a separate doc by marking up the ES3 document. We'll need a "summary of changes" doc, too. As we get agreement on 1 and 3 we should start incorporating it into the ES3.1 spec.

Prep for ES3.1 vs ES4 reconciliation
Lets discuss this at the TC39 F2F tomorrow.

Organizing spec writing effort
Allen: Meta - how to provide meta operations like defining property getters/setters, etc.
PratapL: Date - can spend about 2 days a week – Date.
Doug: can spend 1 day a week.
Kris: getters/setters - can spend couple of hours a week.
Mark: fix, freeze - will not be able to spend time writing - can review content – will help pin down on security aspects.
Collin: version conditioning.
PratapL will maintain the latest stable version of the spec. ES3 will be base the doc.

Separating Meta
Kris: Discussion on getters/setters, how to simulate it using catchall, the need for definegetter/definesetter in ES4.
Allen: It can also be implemented using Meta.
All: Suggested syntax looks like the following:

```javascript
Meta.defineProperty(myObj,
    { name : "foo", setter : function (val) { /* */ }}
)
myObj.foo = x;
```

**Run through deviations doc**
Mark/Allen: Discussion on Object.fix and Object.freeze and how it can be implemented using Meta.
Mark/Allen/Doug/PratapL: detailed updates to the deviations doc (that pratapL will update on the wiki).

**Discuss candidate extensions**
Deferred.

**Next ES3.1WG F2F**
27 May ES3.1 F2F, Yahoo!
Meeting adjourned.
