

ECMA-10, 2nd edition, Data Interchange on Punched Tape

INTRODUCTION

(i) This Standard relates to punched tape used for data interchange. It does not refer to pre-folded tape.

(ii) Only tape with a width of 25.40 mm nominal is considered standard for data interchange.

(iii) Punched tape for data interchange must be straight and its edges parallel. No deformation or notches on the edge of the tape can be permitted.

(iv) This Standard is divided into three parts. The appendices are not part of the Standard.

- Part 1
- Part 2
- Part 3 :
- Appendix A
- Appendix B
- Appendix C

Properties of un-punched tape

Properties of punched tape for data interchange

Coding on punched tape for data interchange

Recommendations for the handling of punched tape

Measurement of Light Transmittance

Specific test methods
