

ECMA-3, CMC7 Printed Image Specification

SCOPE

ECMA Technical Working Committee on Character Recognition set up in 1962 a Task Group on MICR, which presented a preliminary report on the MICR situation in September 1962. In view of the decisions made by different Bankers Organizations in Europe, it appeared that further work was still needed in order to have good working specifications for the CMC7 font.

The work has led to the production of the Standard ECMA-3 for the CMC7 printed image specification dated April 1964.
