

ECMA/TR 24, Interfaces between Data Processing Equipment and Private Automatic Branch Exchange – Circuit Switching Application

SCOPE

The scope of this Technical Report is the application of ISDN principles to the interfaces between Data Processing Equipment and a Private Automatic Branch Exchange.

The interface of interest is the ISDN user-to-network interface, usually referred to as the S reference point. The S reference point is defined in the CCITT ISDN reference configuration (CCITT Recommendation 1.411).
