Minutes of the:	*Ecma TC39-TG1*
held in:	*Phone conference*
on:	*17th May 2006*

Attendees

Meeting time 10am PDT.

On phone:

- Francis Cheng, Adobe Systems
- Jeff Dyer, Adobe Systems
- Gary Grossman, Adobe Systems
- Pratap Lakshman, Microsoft
- Graydon Hoare, Mozilla Foundation

Agenda

Note new meeting day of week for phone conferences.

- Revising proposals
- Spec bug reporting
- package semantics

Discussion

Revising proposal

Graydon volunteered to revise the stable proposals. We will make sure there is a clear description of our agreement at the top and leave the full text of the discussion/rationale at the bottom. Proposals that are not well understood run the risk of being deferred. We have a self imposed deadline of clarifying all proposals by the end of the f2f next week.

Spec bug reporting

Francis has put in place a system for tracking spec bugs. As we note bugs in the spec using a **Bug** tag, he will number them and enter them into the bugs page. We will then track them as Open, Fixed and eventually Retired bugs.

Package semantics

Pratap asks whether packages introduce scopes. The answer is no, but with multiple compilation and app domains it is possible to have names in the current compilation unit shadow those in another. The semantics of multiple compilation units is tbd.

Next meeting

We meet at Mozilla in Mountain View next week Thursday and Friday. Start is at noon Thursday.
