

**Minutes of the:
held in:
on:**

**Ecma TC39-TG1
Phone conference
1st November 2006**

Attendees

- Ed Smith, Adobe Systems
- Graydon Hoare, Mozilla Foundation
- Dave Herman, Northeastern
- Cormac Flanagan, UCSC
- Prataq Lakshman, Microsoft
- Jeff Dyer, Adobe Systems
- Doug Crockford, Yahoo!

Agenda

- Reference implementation
- Wiki export
- Grammar notation
- Browser security summit

Discussion

- Reference implementation
 - We are off to a slow start writing ML code
 - Need to learn more about using the language to become productive
 - Use ML experts (Graydon, Dave, and Cormac) when stuck
 - Current ownership (Jeff - parser, Dave/Cormac - typechecker, Lars - evaluator, Graydon - all)
 - We would like for the typechecker and evaluator to use the same patterns where it makes sense
 - We would like to have a basic interpreter running by this time next week
- After fixing some of the notation pages, we will re-export the wiki (later today)
- Pratap asks, will there be a normative grammar other than the ML based parser?
 - Answer, yes
 - See current [normative grammar](#)
 - Pratap is interested in a EBNF notation and volunteered to investigate rewriting the current grammar as EBNF
- Yahoo! (Doug) would be please to host a security summit colocated with the W3C .. and the next f2f ECMAScript meetings
 - Doug needs to confirm required attendees from each browser vendor
 - TG1 participants are also invited, but not required, to attend
 - Tentative date is Wednesday November 15th
