New & GeneratorFunction

Current Semantics:

- [[call]]: `this` set normally by caller.
- [[construct]] `this` is a dynamic ReferenceError.

Issues:

- Potentially confusing
- New doesn't do anything useful

Possible solutions:

- GeneratorFunction doesn't implement construct, so new throws.
- `this` is not a dynamic ReferenceError, but instead refers to the GeneratorFunction instance.
  - Aligns with current implementations (Babel, V8, SM)
