

# **ECMA-67, 130 mm Flexible Disk Cartridge Labeling and File Structure**

## **SCOPE**

The aim of this Standard ECMA-67 is to facilitate the interchange of information recorded on both types of 130 mm flexible disk cartridges between users of different systems. This is accomplished by defining the basic characteristics of the blocks containing the records which constitute the file, as well as the file structure, and by specifying recorded labels to identify files, file sections, and volumes of flexible disk cartridges.

This Standard provides specifications for file and labeling facilities. It defines three nested levels of interchange:

-at the first level, called BASIC INTERCHANGE (BI), it is possible to interchange data by using a minimum set of the facilities provided,

-at a second level, called EXTENDED INTERCHANGE LEVEL 1 (E1), it is possible to interchange data using this minimum set together with blocks having a length greater than that of the physical records and with blocked records,

-at the third level, called EXTENDED INTERCHANGE LEVEL 2 (E2), it is possible to interchange data by using the complete set of the facilities provided.
