Introduction

Test262 is a project of Ecma International's Technical Committee 39 that has a goal to make a test suite widely available that can be used by ECMAScript implementers to improve their adherence to the Ecma-262 specification. The test suite consists of individual tests that have been contributed by Ecma TC39 members. The test262 test suite is publicly available and is designed to be executable by any modern web browser simply by loading the web page at http://test262.ecmascript.org.

Ecma Secretariat editing note: The URLs in this draft Technical Report may change. In the spirit of the experimental Ecma Software Copyright Policy, it is the intention that all software mentioned in this draft Technical Report are stored/mirrored on servers that are fully under the control of Ecma International and that Ecma International will own a copyright of the software.

This Ecma Technical Report has been adopted by the General Assembly of December 2011.
"COPYRIGHT NOTICE

This document may be copied, published and distributed to others, and certain derivative works of it may be prepared, copied, published, and distributed, in whole or in part, provided that the above copyright notice and this Copyright License and Disclaimer are included on all such copies and derivative works. The only derivative works that are permissible under this Copyright License and Disclaimer are:

(i) works which incorporate all or portion of this document for the purpose of providing commentary or explanation (such as an annotated version of the document),

(ii) works which incorporate all or portion of this document for the purpose of incorporating features that provide accessibility,

(iii) translations of this document into languages other than English and into different formats and

(iv) works by making use of this specification in standard conformant products by implementing (e.g. by copy and paste wholly or partly) the functionality therein.

However, the content of this document itself may not be modified in any way, including by removing the copyright notice or references to Ecma International, except as required to translate it into languages other than English or into a different format.

The official version of an Ecma International document is the English language version on the Ecma International website. In the event of discrepancies between a translated version and the official version, the official version shall govern.

The limited permissions granted above are perpetual and will not be revoked by Ecma International or its successors or assigns.

ECMA-262 Test Suite

1 Scope

This Ecma Technical Report describes a test suite and harness developed by TC39 partners to validate how well an implementation of the Standard ECMA-262 Edition 5.1 adheres to the ECMA-262 set of standards. It is assumed that readers are familiar with general software testing methodologies and the Standard ECMA-262 Edition 5.1.

4 Status

Development of test262 is an on-going process. As of September 2011, test262 Version 5 consisted of 11,028 individual test files covering the majority of the pseudo-code algorithms defined in the Standard ECMA-262 Edition 5.1. Each of these files contains one or more distinct test cases. This marks the most comprehensive ECMAScript 5 test suite to date. While test coverage is broad, TC39 does not consider coverage to be complete and as with any software project there exists the possibility of omissions and errors. As TC39 members correct issues or contribute further tests the test suite will be updated at http://www.ecma-international.org/publications/files/ECMA-TR/test262-Latest.zip. Prior snapshots of the test suite will be available at http://www.ecma-international.org/activities/Languages/test262/archive.htm. The active development version of the source code may be viewed at http://hg.ecmascript.org/tests/test262.

5 Contributions

6 Relation to ECMA-262 Edition 5.1

The Standard ECMA-262 Edition 5.1 specification provides the normative definition of the ECMAScript programming language. Test262 is a non-normative test suite for implementations of Standard ECMA-262 Edition 5.1. Any differences between the requirements of ECMA-262 Edition 5.1 and those tested by test262 must be resolved in favour of the ECMA-262 Edition 5.1 specification.
