## Summary

Enumerates the elements of a dictionary.

## Inherits From: System.ValueType

**Library:** BCL

**Thread Safety:** Static members of this type are thread safe. Any instance members are not guaranteed to be thread safe.

## Description

If the underlying dictionary is modified, or the value of any key in that dictionary is modified, the behavior of the enumerator is unspecified.

For information on the behavior of enumerators, see the Description section of

`System.Collections.Generic.IEnumerator<T>.`

Default implementations of collections in `System.Collections.Generic` are not synchronized.

This type is a member of type

`System.Collections.Generic.Dictionary<TKey, TValue>.`
