

System.IFormatProvider Interface

```
[ILAsm]
.class interface public abstract IFormatProvider

[C#]
public interface IFormatProvider
```

Assembly Info:

- *Name:* mscorlib
- *Public Key:* [00 00 00 00 00 00 00 00 04 00 00 00 00 00 00 00]
- *Version:* 2.0.x.x
- *Attributes:*
 - CLSCompliantAttribute(true)

Summary

Implemented by classes that supply objects that provide formatting services.

Library: BCL

Description

[*Note:* When a *format specifier* includes symbols that vary by culture, such as the currency symbol included by the "C" and "c" formats, a *formatting object* supplies the actual characters used in a string representation of a numeric value. For example, a formatting object might supply "\$" for the currency symbol. The formatting object for system-supplied numeric types is a `System.Globalization.NumberFormatInfo` instance. For `System.DateTime` instances, a `System.Globalization.DateTimeFormatInfo` is used.

`System.IFormatProvider` contains the `System.IFormatProvider.GetFormat` method. The consumer of an object should call this method to obtain a formatting object.

]

IFormatProvider.GetFormat(System.Type) Method

```
[ILAsm]  
.method public hidebysig virtual abstract object GetFormat(class  
System.Type formatType)  
  
[C#]  
object GetFormat(Type formatType)
```

Summary

Returns a `System.Object` that provides formatting services.

Parameters

Parameter	Description
<i>formatType</i>	The <code>System.Type</code> of the formatting object to be returned.

Return Value

The current instance, if *formatType* is the same type as the current instance; otherwise, a null reference.

Behaviors

As described above.

How and When to Override

Implement in classes that provide formatting objects for use in methods that generate or parse string representations of objects, such as `ToString` and `Parse`.
